

NEWS RELEASE – FOR IMMEDIATE RELEASE

On-Site, Percent Measurement of Ethanol in Gasoline in Under a Minute

East Norwalk, CT – April 28, 2010 -- As more mandates for minimum blends of ethanol in gasoline come into effect, terminal managers, distributors, fleet managers, regulators and tax enforcement agencies need a quick and accurate way to measure the percent ethanol in gasoline. The InfraCal Ethanol Blend Analyzer from Wilks Enterprise, Inc. is portable, rugged, compact and specifically designed for use by non-technical personnel. The user can take on-site measurements in under a minute at fuel terminals, service stations or tanker spot checks and not wait days for off-site test results.

The InfraCal Ethanol Blend Analyzer is a low-cost analyzer that weighs less than 5 lbs. and can be operated from a battery pack or cigarette lighter adapter cable. It is self-contained with an internal calibration program and direct readout display. It can be supplied with a printer and includes RS 232 interface that allows for data transmission to a PC. The InfraCal Ethanol Blend Analyzer is ideal for laboratory analysis or rugged environments where a single, repetitive analysis is needed.

For further information on the InfraCal Biodiesel Blend Analyzer for measuring blend ratio, please contact: Wilks Enterprise, Inc., 25 Van Zant Street Ste. 8F, E. Norwalk, CT 06855 USA, TEL: 203-855-9136, FAX: 203-838-9868, Email: info@wilksir.com, Web Site -- www.wilksir.com.

About Wilks Enterprise, Inc.

Headquartered in E. Norwalk, Connecticut, Wilks Enterprise specializes in easy-to-use, portable mid-infrared analyzers for specific measurement applications. All Wilks analyzers have been specifically designed for on-site use by non-technical personnel and are used for a wide variety of applications in the biofuels, environmental, petrochemical, quality control, and manufacturing industries. These portable analyzers enable analytical measurements to be made in the field, helping to eliminate the wait for off-site lab results.
