

InfraRan Specific Vapor Analyzers for Measuring Refrigerant Gases Help Ensure Safe Air Quality Onboard British Ministry of Defense (MOD) Submarines

Wilks Enterprise, Inc. has delivered 26 portable refrigerant gas monitors to the British MOD through their agent in the UK, Quantitech Ltd. These monitors are being used onboard British submarines to help ensure safe air quality conditions.

The Wilks InfraRan Refrigerant Specific Vapor Monitors that were supplied to the British MOD are portable infrared vapor analyzers, weighing just 18 pounds each. They are factory calibrated to continually measure R114, R134a, R236fa, and Halon 13B1 in the 0 to 2500 part per million (ppm) concentration range and alarm should preset limits be exceeded. Their user-friendly, menu-driven software and portability make on-the-spot detection and quantitative measurement of refrigerant gases fast and easy.

For further information on the InfraRan Refrigerant Specific Vapor Analyzer, contact: Wilks Enterprise, Inc., 140 Water Street, South Norwalk, CT 06854, TEL: 203-855-9136, FAX: 203-838-9868; Web site: **www.wilksir.com**.
